

Plan Your Model

Partner 1: _____ Partner 2: _____ Period: _____

1. What is your project called? What sprite will it control?

Example: "Lean-Right Dino" with the dinosaur. Or "Happy Cat" with a cat sprite. Make it your own.

2. What are your 2-3 classes? (What will your AI tell apart?)

Examples: lean LEFT / lean RIGHT. Or thumbs UP / thumbs DOWN / open HAND. Pick movements you can do at your seat.

3. What will the sprite DO for each class?

Example: "lean LEFT → dinosaur moves left 10 steps." Match each class to an action.

4. How will you take 30+ photos per class?

Different angles, different lighting, different distances. List 3 things you'll change between photos.

Check Your Work

5. BIAS CHECK: Who or what might your AI fail on?

Start with: "Our AI might fail when _____. To fix it, we would _____." Test it before you leave!

6. SAVE YOUR MODEL LINK IN CANVAS

After Export -> Upload, copy the model URL. Paste it in your Canvas submission comment so you can reopen it on Day 5.
